**SUBJECT: Report of Significant Logistics Activities; Week Ending 21 February 1972**

d. Water Detection System: A new water detection system for use with computer centers was successfully demonstrated by AQ Services Company of Rockville, Maryland. Based on a continuous wire element rather than sensing devices, this unit can detect water anywhere along its length. The company was asked to prepare a proposal and cost estimate for a ten-zone system. Upon receipt of the proposal and cost estimate, personnel from the Real Estate and Construction Division, OL, will consult with ISD and OCS computer center representatives concerning procurement and installation of this system.

e. Demolition of Water Tower: The Agency has concurred in GSA's selection of the General Wrecking Company to demolish the water tower on the property recently turned over to the Department of the Interior. The contractor now has 10 days to provide a performance bond and 27 days thereafter to complete the job.
